Yarmouk University – Data Science & AI Student

Dubljly addresses a critical educational barrier affecting millions of Arabic speaking students: limited access to high-quality educational resources due to language constraints. While the vast majority of premium academic content is produced in English, many students in the Arab world lack the proficiency needed to fully comprehend complex concepts, significantly hindering their educational progress and career opportunities.

This digital divide perpetuates educational inequality, as students without strong English skills cannot access the same wealth of knowledge as their English-proficient peers. Traditional solutions like subtitles or text translations often fail to create immersive learning experiences, while professional dubbing services remain prohibitively expensive and time consuming.

Dubljly harnesses advanced AI technologies to bridge this gap through an innovative platform that transforms English educational videos into accessible Arabic content while preserving critical technical terminology.

Our solution:

Employs cutting-edge speech recognition and machine translation (fine-tuned LLMs) to generate natural-sounding Arabic dubbing that maintains the educational integrity of the original content

- Preserves essential technical terms in English while providing contextual Arabic explanations, ensuring students develop bilingual domain expertise
- Features an AI-powered interactive chatbot that answers questions about the content, facilitating deeper comprehension and active learning
- Generates concise summaries and learning materials from videos, enhancing knowledge retention

By democratizing access to world-class educational content, Dubljly empowers Arabic-speaking students to overcome language barriers and access the same quality of education available to English speakers. Our platform stands at the intersection of educational technology and language accessibility, using AI to create a more equitable global learning ecosystem.

With Dubljly, we envision a future where language is no longer an obstacle to knowledge acquisition, where students from all linguistic backgrounds can access the educational resources they need to thrive in an increasingly competitive global economy.

Market Analysis

Primary Market Segments

Educational Institutions in Jordan (B2B)

- **Universities and Colleges**

- **Size:** 32 higher education institutions (10 public, 22 private) with approximately 300,000 students
- **Key targets:** Jordanian universities and colleges
- **- Need:** Cost-effective solutions to provide Arabic versions of course materials and facilitate students' access to external resources.
- **Value proposition:** Enhance learning outcomes for students with limited English proficiency

- **K-12 Schools**

- **Size:** 3,900+ schools with approximately 2.1M students
- **Key targets:** Private schools (approx. 3,400) with international curricula
- **Need:** Supplementary educational resources aligned with curriculum requirements
- **Value proposition:** Bridge the gap between global educational content and local language needs

- **Online Learning Platforms**

- **Target:** Jordan-based platforms like Edraak (Queen Rania Foundation initiative), Abwaab, and JoAcademy
- **Need:** Localized content from international sources
- **Value proposition:** Expanded catalog of high-quality Arabic educational materials

Individual Learners in Jordan (B2C)

- **University Students**

- **Size:** 300,000+ university students in Jordan
- **Need:** Better comprehension of English academic materials
- **Value proposition:** Improved academic performance and subject mastery

- **Professional Development Learners**

- **Size:** 350,000+ professionals in tech, healthcare, and education sectors
- **Need:** Access to international training resources
- **Value proposition:** Career advancement through access to global knowledge

- **Self-Directed Learners**

- **Size:** Estimated 500,000+ individuals pursuing informal education
- **Need:** Removal of language barriers to specialized knowledge
- **Value proposition:** Accessibility to world-class educational content

Expansion Strategy to Arab World

Phase 1: Jordan (Year 1)

- Focus on establishing product-market fit within Jordanian educational ecosystem
- Target: 5 university partnerships, 20 K-12 schools, 15,000 individual users

Phase 2: Near Expansion (Year 2)

- Expand to neighboring Levant countries (Palestine, Lebanon)
- Target: 12 additional universities, 50 K-12 schools, 45,000 total users

Phase 3: Gulf States (Year 2-3)

- Expand to Saudi Arabia, UAE, and Kuwait
- Target: 25 additional universities, 100 K-12 schools, 150,000 total users

Phase 4: North Africa (Year 3-4)

- Expand to Egypt, Morocco, and Tunisia
- Target: 40 additional universities, 200 K-12 schools, 300,000 total users

Phase 5: Full Arab World Coverage (Year 4-5)

- Complete expansion to remaining Arab League countries
- Target: 100+ universities, 500+ K-12 schools, 750,000+ total users

SWOT Analysis

Strengths:

- Solution addresses critical educational needs in Jordan, where English proficiency varies widely (only 11% of Jordanians report fluent English skills)
- Alignment with Jordan's National Digital Transformation Strategy and Vision 2025
- Capacity to work with Jordan's specific Arabic dialect while maintaining Modern Standard Arabic compatibility
- Jordan's strategic location as an educational hub in the Levant region
- Leverages Jordan's growing tech ecosystem and talent pool in AI/ML development

Weaknesses:

- Initial development and training costs are significant for a Jordan-based startup
- Need for continuous AI model refinement to maintain quality standards
- Internet infrastructure challenges in rural Jordanian regions may limit accessibility

Opportunities:

- Empowering Education Through Accessibility: By removing the English language barrier, Dabljy opens the door for millions of Arabic-speaking students and professionals to access world-class educational resources, regardless of their language proficiency.
- Strong government support for educational technology initiatives (Jordan Education Initiative)
- Strategic partnership potential with Jordan's established educational institutions
- Access to funding from Jordan-focused innovation programs (ISSF, Oasis500, etc.)

Threats:

- Limited purchasing power of Jordanian educational institutions and individual learners
- Competition from free alternatives and international players entering the market
- Cultural sensitivity issues in translation that AI may not adequately address
- Digital literacy barriers among traditional educators

Competitive Landscape

Criteria	Dubjly	Local Translation Services	Regional Video Translation Tools	Jordanian Educational Content Providers	International Tools
Target Audience	Arabic-speaking students, professionals, institutions	General businesses	Businesses, general audiences	Jordanian students	Global users
Content Type	Educational videos (STEM, tech, business)	Documents, text-heavy materials	Mixed, not education-focused	Text-based lessons, local curriculum	Text translation only
Translation Mode	AI video dubbing with TTS & preserved technical terms	Human/manual translation	Manual or semi-automated	Pre-created Arabic content	Text translation only
Language Support	Arabic (native voice) + glossary in English	Arabic	Multiple languages	Arabic	Multilingual
Turnaround Time	Near-instant (automated)	Several days to weeks	Days	Pre-recorded	Instant for text only
Interactivity	AI chatbot, glossary, quizzes, summaries	None	Minimal	Low	None
Scalability	High (automated, cloud-based)	Low	Medium	Medium	High (but limited to text)

Target Financial Partners:

- Jordan Enterprise Development Corporation (JEDCO), Ministry of Digital Economy and Entrepreneurship Initiatives
- Jordan Telecom (Orange Jordan), Zain Jordan, Mawdoo3

Market Opportunity

The Language Barrier in Jordanian Education

Jordan faces a critical educational challenge: while high-quality learning resources are increasingly available online, the language barrier prevents most students from fully utilizing these materials. Recent studies from Jordan's Ministry of Education indicate that only 13% of Jordanian students possess sufficient English proficiency to comprehend advanced academic content, despite English being taught from early grades.

This creates a significant educational gap with measurable consequences:

- 76% of Jordanian university professors report their students struggle to engage with English-language research materials (Jordan Higher Education Report, 2023)
- 82% of STEM students cite language barriers as a major obstacle to understanding international educational content (University of Jordan Survey, 2022)
- An estimated JOD 17.5 million (\$24.6M) is spent annually on supplementary tutoring to help students understand English educational materials

The Digital Educational Content Surge

The digital transformation in education has accelerated dramatically, creating unprecedented opportunity:

Educational video content is growing at 43% annually worldwide

Jordan's internet penetration has reached 89.8% (2023 Digital Jordan Report)

92% of Jordanian students now have smartphone access, with 73% using them for educational purposes

COVID-19 permanently shifted learning patterns, with 65% of Jordanian students now using online supplementary resources

Yet a massive disconnect exists: while demand for educational content is soaring, language accessibility remains a critical barrier. The top 50 educational YouTube channels have over 500 million combined subscribers, but less than 2% of this content is available in Arabic.

Dubjly's Market Opportunity

Technological Readiness:

- Recent breakthroughs in AI dubbing and translation have reached commercial viability
- Development costs have decreased by 70% in the past two years
- Jordan's advanced ICT infrastructure supports cloud-based AI services

Policy Alignment:

- Jordan's Digital Transformation Strategy explicitly prioritizes Arabic educational content
- The Ministry of Education's 2022-2025 strategic plan emphasizes technology-enhanced learning
- Queen Rania Foundation actively supports Arabic educational technology initiatives

Expanding Total Addressable Market (TAM):

- Jordan's edtech market: JOD 35M (\$49M) with 12% CAGR
- MENA region edtech market: \$4.3B with 14% CAGR
- Global educational translation market: \$28B with 8% CAGR

Product and Service Presentation

Functions:

- AI-Powered Chatbot: Answers questions about video content in Arabic.
- Keyword Explanation: Provides simplified explanations of complex topics.
- Content Summary: Creates concise video summaries with adjustable levels of detail.
- Test Preparation: Create quizzes to test comprehension of this video.
- Personalized Learning: Adapts to the student's questions and knowledge level.

User Experience:

Easy and smooth to use.

- Download the video or enter its link.
- Wait a few seconds for the video to be dubbed into Arabic.
- Focus on the keywords that appear alongside the video, as they contain detailed explanations.
- Preview the dubbed video and download or stream it directly.
